

## Some of the more flashy projects I have worked on

Bertha2: <https://github.com/boyesm/Bertha2/>

A self playing piano. When it is streaming on Twitch, you can put a Youtube link in the chat and it will try to play it on the piano

Enhanced Flashbang: <https://github.com/timmy6figures/enhanced-flashbang>

Whenever a bright light goes off in the video game CS:GO, a light bar lights up in front of your computer.

AutoAnki: <https://github.com/timmy6figures/AutoAnki>

A project to automatically make flashcards for the Anki flashcard app. Give it a .txt app full of Chinese text, and it will automatically grab all of the words, definitions, pronunciations and other information, and make it into a Anki 'deck'

I am working on a website for this so that you can upload files from the web, and download the deck.

For more information or to contact me, go to [my Github](#). There you can also see some of the other projects I have made
